EDGE ELECTRICAL & SOLAR

Standard Terms, Conditions & Compliance Statement

1. Payment Terms & Retention of Title

- **Deposit:** An **80% deposit** is required upon quote acceptance to secure equipment allocation and schedule installation dates.
- **Final Balance:** The remaining **20% balance** is payable immediately upon practical completion, commissioning, and issuance of the Electrical Certificate of Compliance (CoC).
- **Ownership:** All inverters, batteries, solar panels, mounting hardware, and ancillary components remain the sole legal property of Edge Electrical & Solar until the invoice is paid in full.

2. Electrical Compliance (SANS 10142-1) & CoC

- All electrical and solar PV installations are executed in strict accordance with the Occupational Health and Safety Act (Act 85 of 1993) and the South African National Standard **SANS 10142-1**.
- Upon completion and final payment, a valid **Certificate of Compliance (CoC)** and corresponding test report covering the newly installed solar system will be issued.
- **Pre-Existing Faults:** This quote covers the new solar installation only. Should routine compliance testing reveal pre-existing electrical faults, non-compliant earthing, or unsafe wiring on the property's existing installation that prevent the legal issuance of a CoC, remedial work will be quoted separately for the client's approval.

3. Warranties

- **Workmanship Warranty (12 Months):** Edge Electrical & Solar provides a **12-month workmanship warranty** from the date of commissioning, covering installation labour, cabling, trunking, DB modifications, and roof mounting integrity.

- **Equipment Warranties:** Hardware components (inverters, lithium batteries, and PV modules) carry their respective Original Equipment Manufacturer (OEM) warranties as detailed on your proposal and spec sheets.
- **Exclusions:** Warranties will be rendered void if the system is tampered with, opened, modified, or repaired by any person not authorised in writing by Edge Electrical & Solar, or in the event of damage caused by lightning strikes, extreme weather, fire, pest damage, or grid surges exceeding standard SPD ratings.

4. Site Conditions, Roof Integrity & Monitoring

- **Roof Structure:** Unless explicitly quoted otherwise, it is assumed that the existing roof structure is sound and capable of supporting the static and wind loads of the solar array. Any cracked tiles or brittle sheets discovered during installation will be replaced where spare tiles are provided by the client.
- **Internet Connectivity:** App-based system monitoring requires a stable 2.4GHz Wi-Fi signal at the inverter location. Edge Electrical & Solar is not responsible for monitoring interruptions caused by client router changes, ISP downtime, or weak Wi-Fi coverage.
- **Site Access:** The client agrees to provide safe, unobstructed access to the roof, distribution boards, and installation areas during normal working hours.

5. Quote Validity & Variations

- Due to currency fluctuations and supplier stock availability, this quotation is valid for **7 days** from the date of issue unless stated otherwise on the quote document.
- Any changes to equipment specifications, cable routes, or scope of work requested by the client after acceptance will be billed as a variation order.
